DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 1-25 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-25 of prior U.S. Patent No. 6,592,606. This is a double patenting rejection.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 3-10, 20, and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3-10 recited the term "a hinge or each hinge" are unclear as to whether being referred to "at least on hinge" as recited in claim 1.

Claim 20, the term "a stop fitting" is unclear, due to it has positively recited in claim 19.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1, 3, 4, and 10-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Broome et al. (U.S. 6,152,946).

Broome et al shows in figures 1-8, a guide wire (32) is considered to have living hinges along its length, due to its flexibility to guide the filter device through the vasculature of a patient; an expandable cage assembly (24) connected to filter material (20), wherein the filter material (20) comprises a plurality of openings (40), wherein the guide wire (32) includes a coiled tip (fig.9) at the distal end; and wherein the expandable cage assembly comprises a plurality of struts (30) thereon.

5. Claims 22-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Daniel et al. (U.S. 6,171,327).

Danie et al shows in figures 1-16, a guide wire (26) is considered to have living hinges along its length, due to its flexibility to guide the filter device through the vasculature of a patient; an expandable cage assembly (28) connected to filter

material (21), wherein the filter material (21) comprises a plurality of openings (23), wherein the guide wire (26) includes a coiled tip (30) at the distal end; a delivery sheath (12) adapted to maintain the expandable cage assembly in a collapsed condition; and an obturator (640) attached to the guide wire (626) (Figs. 16 and 17).
